TGH has been present in Sudan since 2004, concentrating its activities in Darfur, despite a constantly precarious and complex situation, with occasional interventions in other states (South Kordofan, Gedaref). 9 bases were opened between 2004 and 2023.

To combat the effects of repeated emergencies, to alleviate the chronic underdevelopment of the country’s outskirts, and to respond to the consequences of natural disasters, TGH has developed a flagship programme in the Water-Hygiene-Sanitation sector in West and Central Darfur, while also carrying out multi-sector projects.

From 15 April, TGH took exceptional measures to ensure the safety of its teams. Our teams have remained mobilised to assess needs where they exist and explore ways of meeting them.

Twenty years later, history is failing Darfur once again, with one notable absence: the cries of indignation that resounded so powerfully 20 years ago.

We hope so, but we don’t know if we were able to contribute to making this little girl’s life simpler, if not happier. We do know, however, that we are more determined than ever to provide assistance, without discrimination, to all those in need, in Darfur and in the other regions of Sudan beset by fighting, as we have done uninterruptedly for the past 20 years.
In the field, we develop our activities in cooperation with various local partners: communities, civil society organisations and local NGOs.

### Water, Hygiene and Sanitation

- Guaranteeing access to water, hygiene and sanitation, and mitigating the risk of epidemics of water-borne diseases.
- Distribution of drinking water (tanker trucks, trolley deliveries, renovation of water points, water quality monitoring)
- Construction of emergency latrines and training of local people in their maintenance and use
- Distribution of hygiene products, including menstrual products, and hygiene promotion sessions
- Contribution to sustainable and healthy waste management

### General Protection and Child Protection

- Strengthening the protection of displaced persons and host populations, especially children.
- Implementation of a psychosocial support mechanism, education in times of emergency, accompanied by the referral of vulnerable cases
- Raising parents' awareness of their children's mental health issues
- Recreational activities run by local communities for the benefit of children

### Food Security and Livelihood

- Providing essential food aid to meet minimum daily nutritional requirements, boosting dietary intake and reducing the risk of malnutrition.
- Evaluation of prices for inputs, agricultural tools and food products
- Fair distribution of agricultural inputs and food products

### Emergency Shelters and Non-Food Items

- Helping Sudanese people to overcome the trauma of displacement and secure temporary accommodation with minimum standards of decency.
- Distribution of emergency kits (tents, sleeping bags, mosquito nets)
- Provision of cash to populations to target their specific needs
